

# LYNX Settings - General

These settings can be found in the "General" area of LYNX's **Configuration - Settings** area.

Setting	Notes
Delete Cancelled Imported Sections	<p>When the <a href="#">Status Code Data Translation Table</a> interprets a section as Cancelled in the SIS, this setting determines whether it will be retained in 25Live with a "Cancelled" event state or deleted entirely.</p> <p>If a section has an exam, the exam will be cancelled/deleted as well.</p>
LYNX Notification Email Recipients	<p>The listed recipients will be alerted with email updates for critical <a href="#">LYNX Status and System Messages</a> as well as rare patches and updates required for the LYNX database schema. These alerts are intended for technical administrators rather than classroom schedulers.</p> <div style="border: 1px solid green; padding: 10px; margin-top: 10px;"> <p> <b>System errors after a database copy</b></p> <p>The process of copying production data into a test environment can trigger system errors that can be safely ignored. You may want to leave this setting blank in your <b>test</b> configuration so that administrators do not receive irrelevant emails.</p> </div>
25Live Import Email Notifications	<p>These settings control who will receive email updates when sections are imported and exported from LYNX, as well as how often those updates occur. These alerts are intended for schedulers rather than administrators.</p> <p>Emails are sent on the basis of <a href="#">import "chunks"</a> consisting of about 500 sections each. Thus, term code consisting of 5,000 sections could generate up to 10 emails (one per chunk) if all sections are imported at once.</p>
25Live Import Email Recipients	<p>Imports (or exports) generate emails based on the severity of the <a href="#">import messages</a>, which are classified as Error, Warning, or Info. Depending on your configuration, LYNX will send an email when a section is flagged with an error, an error/warning, or an error/warning/info message.</p>
Academic Priority	<p><a href="#">Academic Priority</a> is the ability for LYNX to resolve classroom conflicts by unassigning an event scheduled in a classroom and booking an imported class in its place. If enabled, it will only replace non-academic events in conflict with assignments imported from the SIS.</p>
Academic Priority Email Recipients	<p>Depending on your configuration, emails can be sent to the replaced event's Scheduler contact role and/or a list of addresses defined in LYNX. The recipient of the email is responsible for following up and finding a new location for the replaced event.</p>
Academic Priority Email Recipient List	
Define Section Time Zone by Campus Code	<p>This setting enables the Campus Code to Time Zone <a href="#">Data Translation</a> table. It is intended for schools who have multiple campuses in different time zones.</p> <div style="border: 1px solid blue; padding: 10px; margin-top: 10px;"> <p> <b>How Time Zones Are Mapped in 25Live</b></p> <p>If you are a single-campus institution, the "else" rule is sufficient here. However, if you have multiple campuses across the country or the world you will find this very useful. Add a rule for each campus that sets it to the correct time zone, and when LYNX imports classes it will adjust their starting times relative to the system time zone in 25Live.</p> <p>For example, a school has a campus in New York and one in Los Angeles. Because New York is the main campus, all class times are entered in the SIS using EST/EDT. With no translation configured, the first class of the day on both campuses shows up in 25Live as 9:00 am EST/EDT. Published calendars based on this data will be unreliable. With translation configured, the NY class is imported with a starting time of 9:00 am and the LA class is imported with a starting time of 6:00 am. This works better for both published calendars and the personal time zone preferences of LA users.</p> </div>

Filter Data By Institution Codes	These settings are designed to be used by schools that have multiple institutions that share a Campus Solutions database but need to separate 25Live/LYNX data by institution. If set to "Yes," course section data is automatically filtered by institution code without needing to set import extract set criteria, and all data visible in the LYNX user interface is filtered according to this configuration.
Filtered Institution Codes (Campus Solutions only)	Because it involves some processing overhead, this setting should NOT be used by multi-institution schools that simply want to automatically filter out unused institution codes and prevent them from appearing in 25Live entirely. You will have better performance simply filtering them out using <a href="#">extract set criteria</a> .
